ABG06795 standard; protein; 594 AA

13-FEB-2002 (first entry)

Novel human diagnostic protein #6786.

Human; chromosome mapping; gene mapping; gene therapy; forensic food supplement; medical imaging; diagnostic; genetic disorder.

Homo sapiens.

WO200175067-A2

11-OCT-2001.

30-MAR-2001; 2001WO-US008631

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to isolated polynucleotide (I) and polypeptide (II) creation (PCR) primers, oligomers, and for chromosome and gene mapping, CC and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed cC in diagnostics as expressed sequence tags for identifying expressed cC in diagnostics as expressed sequence tags for identifying expressed cC useful for generating antibodies against it, detecting or quantitating a ccivity of (II) or to treat disease states involving (II). (II) is conjugated in tissue, as molecular weight markers and as a food conjugated in tissue, as molecular weight markers and as a food conjugated in the shinding partners are useful in medical imaging conjugated in the protein expression or biological activity. The collection of the produce of the expression or biological activity. The collection of generatics, gene mapping, identification of mutations conjugated to produce other types of data and products dependent on DNA and conjugated activity and conjugated activity and conjugated activity and conjugated activity and conjugated activity and conjugated activity and conjugated activity and conjugated activity and conjugated activity and conjugated activity. The collection of mutations conjugated activity and conjugated activity and conjugated activity and conjugated activity and conjugated activity and conjugated activity and conjugated activity and conjugated activity and conjugated activity and conjugated activity and conjugated activity and conjugated activity and conjugated activity and conjugated activity and conjugated activity and conjugated activity and conjugated activity and conjugated activity and conjugated activity and conjugated activity and conjugated activity. The conjugated activity and conjugated activity and conjugated activity and conjugated activity and conjugated activity. The conjugated activity and conjugated activity and conjugated activity and conjugated activity and conjugate
                                                                                                                               5
                                                                                                                                                                  밁
                                                                                                                                                                                         8
                                                                                                                                                                                                                  뫄
                                                                                                                                                                                                                                                 Ş

concern. The cancer maybe used in the method may also be of particular use with patient sharing cancer. The method involves comparing the expression level of a marker in a patient sample and the normal level of expression of the marker in a control non-ovarian cancer sample, where the marker is selected from 363 cancer markers described in the control ton. The method of the invention is useful in diagnosing or characterising cancer, in detecting the presence of cancer as early as comparing cancer, in detecting the presence of cancer as early as comparing the patients having an enhanced risk of developing covarian cancer (e.g. patients having an enhanced risk of developing covarian cancer (e.g. patients having a familial history of ovarian concer). The cancer markers may be used in the management and treatment comparing the patients having a familial history of ovarian concer). The cancer markers may be used in the management and treatment comparities, Alzheimer's disease or Parkinson's disease), brain concerning tits, Alzheimer's disease or Parkinson's disease), brain concerning tits, Alzheimer's disease or Parkinson's disease), brain herriations), inflammations (e.g. bacterial or viral meningities or encephalities)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  8

New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity.

Claim 20; SEQ ID NO 37153; 103pp; English.

The invention relates to isolated polynucleotide (I) and polypeptide (II) creaction (FCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed conditions of (II) or to treat disease states involving (II). (II) is useful in gene therapy techniques to restore normal consistint of (II) or to treat disease states involving (II). (II) is consisted in tissue, as molecular weight markers and as a food conjugation of (II) or distance in the same as a sequence supplement. (II) and its binding partners are useful in medical imaging conjugations and polypurcleotide sequences have applications in conjugation and polynucleotide sequences have applications in conjugation and polynucleotide sequences have applications in conjugation of genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and conjugation acid sequences. AEG00010-AEG30377 represent novel human diagnostic main acid sequences of the invention. Note: The sequence data for this electronic format directly from WIPO at conjugations in the printed specification, but was obtained in flactory published pct\_sequences.

Note: The cc sequence data for this patent did not form part of the printed	CC minerals, cofactors and other nutritional components. The polypeptides can also be used  CC apabilities, fat content, lipid, protein, carbohydrate, vitamins,  CC minerals, cofactors and other nutritional components.	cc can also be used to aid wound healing and epithelial cell proliferation, ct prevent skin aging due to sumburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to	CC arrest, cerebrovascular disorders e.g. cardinovascular disorders e.g. cardinovascular disorders e.g. cerebral ischaemia, angiogenesis, CC nervous system disorders e.g. Alzheimer's disease, infections caused by CC bacteria, viruses and fungi and ocular disorders e.g. corneal infection, CC and many other disorders in the contact disorders e.g. corneal infection,	CC immunoassays e.g. radioimmunoassays or enzyme linked immunosorbant assays CC (ELISA). Disorders which are diagnosed or treated include autoimmune CC diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g.	CC rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used CC in diagnosing a pathological condition or susceptibility to a CC pathological condition. Antibodies to the proteins can also be used in	CC encoded secreted proteins. The nucleic acids and proteins are used to CC prevent, treat or ameliorate a medical condition in e.g humans mice

The invention relates to human novel polypeptides and their associated complynucleotides. The polypeptides and polynucleotides are useful in gene comply for treating, inhibiting or preventing neural disorders, immune cystem disorders (e.g. systemic lupus erythematosus, rheumatoid arthritis cand multiple sclerosis), muscular disorders, respiratory diseases (e.g. companity estibulitis, masal polyps and sinusitis), reproductive disorders, cardiovascular disorders, cardiovascular disorders, cardiovascular disorders (e.g. congenital heart defects, Ebstein's anomaly and hypoplastic left companity diseases), hyperproliferative disorders (e.g. thoughin's disease and conditions), inflammatory diseases (e.g. septic shock, bursitis and compandicitis), allergic reactions and conditions (e.g. asthma), blood crelated disorders (e.g. thrombosis, atherosclerosis and myocardial confarction) and cancerous diseases. Sequences ABU54914-ABU55699 and conditions and concerns thuman novel polypeptides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                29-SEP-2000;

                                                                                                                                                                                                                                                                                                                                                                                                     The invention describes an isolated polypeptide comprising any of 33 90 1273 amino acid sequences (I) given in the specification or its mature form, a sequence that is at least 95 % identical to (I), or a sequence comprising one or more conservative substitutions in the amino acid sequence of (I). The polypeptide is useful for preparing a composition for treating or preventing e.g. cancer. This is the amino acid sequence of a novel human NOV protein

The presence or absence of a tumor can be determined by determining the levels of CRD-BP present in the suspect tissue, where the CRD-BP shields c-myc RNA from endonucleolytic attack and so prolongs its half-life. The methods are used for diagnosing presence or absence of a tumor in a human, especially breast, colon and pancreatic cancer. They are also used to inhibit cancer cell growth
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence
